TalklyAI

Standard Operating Procedure (SOP) Manual

Document Code: SOP-TALKLY-2026
Release Version: 1.0 (Production)
Classification: Internal Operations & Client Guide

1. Platform Overview & System Architecture

TalklyAI is an autonomous voice AI and conversational CRM platform built for high-scale inbound and outbound telephone communications, automated qualification, and omnichannel post-call follow-ups.

2. Operational Procedures by Module

SOP 01: Workspace & Company Vertical Setup

Every lead and call inherits the default corporate industry vertical unless explicitly overridden by a campaign.

1. Log in to the dashboard and open `Settings` (`/settings`).
2. In **Company Profile**, verify **Company Legal Name** (injected into `{{company_name}}` prompt variables).
3. Select **Default Industry / Vertical**:
   - `edtech` : EdTech, Academies & Skill Bootcamps
   - `real_estate` : Developers & Real Estate Brokers
   - `healthcare` : Medical Clinics & Appointment Scheduling
   - `bfsi` : Banking, Financial Services & Insurance
   - `general_sales` : B2B Outbound & Direct Sales
4. Click **"Save Profile"**.

SOP 02: Telephony & Dedicated Caller ID

Configure phone numbers used to reach clients.

- **Option A (Shared Pool):** Default out-of-the-box configuration using Talkly pooled carrier numbers.
- **Option B (Dedicated Line):** Under *Call Settings*, choose **Twilio**, **Exotel**, or **Plivo**. Input your virtual number and carrier API credentials. Select inbound routing to *24/7 AI Receptionist* or *Human Forwarding*.

SOP 03: Automated WhatsApp Cloud Dispatch

Enables instant post-call WhatsApp summaries, brochures, or booking links sent directly to the customer's phone.

1. Navigate to **WhatsApp Automation** under Settings.
2. Toggle **Enable Automated WhatsApp Follow-ups** to Active.
3. Input your Meta **Phone Number ID** and **Permanent System Access Token**.
4. Click **"Test Dispatch"** to confirm delivery to your mobile device, then click **"Save WhatsApp Config"**.

3. Prompt Engineering & Voice Testing

SOP 04: AI Prompt Engineering & Industry Presets

The prompt studio defines how the conversational AI greets, educates, handles objections, and closes callers.

1. Go to **AI Prompt** (`/prompt`).
2. Click a preset chip under *"Load Pre-Built Industry Template"* (e.g. **EdTech / Courses**).
3. **System Prompt Guidelines:**
   - **One-Question Rule:** Require the AI to ask only 1 question per turn.
   - **Dynamic Placeholders:** Use `{{customer_name}}` , `{{company_name}}` , and `{{offering}}` .
   - **Brevity:** Keep spoken responses between 1 to 2 short sentences.
4. **Save Draft & Publish:** Click **"Save Draft"**, then **"Publish"** to sync instructions with the active telephony engine.

SOP 05: In-Browser Live Voice Testing (LiveKit WebRTC)

Allows operators to test natural turn-taking, barge-in interruptions, and voice quality without incurring carrier telephony bills.

1. On the AI Prompt page, click the green button: **"Test in Browser (LiveKit)"**.
2. Click **"Connect & Start Conversation"** and grant browser microphone permission.
3. Verify that the visualizer lights up green and speak into the mic.
4. **Barge-In Check:** Speak while the AI is talking to confirm sub-50ms instant interruption.
5. Click **"End Call"** to disconnect.

4. Lead Management & Campaign Execution

SOP 06: Lead Ingestion & Sector Tagging

Method	When to Use	Sector Behavior
CSV / Excel Bulk Upload	Importing large lead lists (>50 contacts)	Inherits sector column in CSV or selected campaign vertical.
Manual "+ Add Lead"	Single hot lead received from ad form	Assigned to selected campaign or company default vertical.
Quick Call Modal	Immediate ad-hoc test call to a prospect	Automatically defaults to Company Default Vertical in Settings.

SOP 07: Launching Outbound Campaigns

1. Navigate to **Campaigns** (`/campaigns`) and click **"+ New Campaign"**.
2. Define Campaign Name, Target Industry Vertical, and Product Offering.
3. Select target leads from your CRM list.

4. Click **"Create Campaign"**, then click **"Start Campaign"**.
5. Monitor real-time dial progression from the campaign dashboard.

5. Call Intelligence & Lead Qualification Matrix

SOP 08: Post-Call Intelligence & Analytics

Upon call completion, raw audio is transcribed and analyzed by Gemini 2.0 Flash to extract sentiment, interest level, and qualification scores.

Score Range	Classification	Mandatory Operational Action
80 – 100	HOT PROSPECT	Auto-tagged as Converted. Forward immediately to senior account executive for 30-minute callback.
50 – 79	WARM LEAD	Interested but requested later callback or pricing review. Auto-send WhatsApp brochure.
0 – 49	COLD / UNQUALIFIED	Did not pick up, wrong number, or no budget. Add to 14-day re-engagement drip.

6. Troubleshooting & Escalation Matrix

Observed Issue	Root Cause	Standard Resolution Procedure
Phone does not ring on Outbound Call	Missing country code or empty Bolna balance	Verify number starts with `+91` (or valid E.164 code). Check `BOLNA_API_KEY` and prepaid wallet credit.
Lead tagged with wrong Sector badge	Quick Call defaulted to Company's Default Industry	Go to `/settings` and update **Default Industry** to your vertical, or launch via a dedicated Campaign.
LiveKit in-browser test disconnected	Agent worker daemon stopped	Run `python livekit_agent.py dev` in backend and check LiveKit Cloud credentials in `.env.local`.
WhatsApp message not delivered	Meta access token expired	Generate a new permanent System User token in Meta Business Manager and update in Settings.

7. Daily Run-of-Show Checklist

- [ ] **09:00 AM — Wallet Health:** Check Billing page to verify prepaid minutes > 500.
- [ ] **10:00 AM — Campaign Launch:** Verify prompt in LiveKit browser test, then start scheduled campaigns.
- [ ] **02:00 PM — Hot Lead Dispatch:** Filter Calls history by `AI Score ⩾ 80` and assign hot leads to closers.
- [ ] **06:00 PM — CRM Reconciliation:** Export daily CSV backup from Leads page.
